(54) LOW-REFLECTION ELECTRICALLY CONDUCTIVE LAMINATED FILM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a low-reflection transparent electrically conductive laminated film used for the front plate of a cathode-ray tube, a plasma display or the like and excellent in antistatic property, electromagnetic wave shielding property, antireflection property, mechanical characteristics and stain-proofing property.

SOLUTION: The low-reflection transparent electrically conductive laminated film has a structure including a hard coat layer, a transparent electrically conductive layer having particles of one or more metals and a transparent coat layer formed on the outside of the transparent electrically conductive layer, having a refractive index different from that of the transparent electrically conductive layer and excellent in stain-proofing property on a transparent substrate. Since a compound having stain-proofing property has been added to the transparent coat layer having a refractive index different from that of the transparent electrically conductive layer, the one transparent coat layer can attain both antireflection property and stain-proofing property.
